

Introduction to NCEP's time lagged North American Rapid Refresh Ensemble Forecast System (NARRE-TL)

**Binbin Zhou^{1,2}, Jun Du², Geoff Manikin²
& Geoff DiMego²**

- 1. I.M. System Group**
- 2. EMC/NCEP/NWS/NOAA**

15th Conference on ARAM, Aug 1-4, 2011, Los Angeles, CA

■ Content

- Background
- NARRE-TL configuration
- Products
- Evaluation (compared to VSREF)
- Future work
- Summary

■ Background

RR will be implemented at NCEP in fall of 2011 to replace RUC

RR: same purpose for aviation, same hourly cycles, same 18 forecast hours, and same resolution as RUC (13km), but with more advanced WRF-ARW model and GSI analysis system, covers larger N.A. domains plus Alaska

NCEP and GSD agreement: 3 WRF-ARW and 3 WRF-NMMB members will be combined to generate N.A. RR Ensemble (6 member NARRE)

Before 6-membered NARRE emerging, first build a Time-lagged NARRE system based on current RR and operational NAM. Benefits:

- (1) Fully utilize existing hourly output RR data**
- (2) Replace VSREF to provide probabilistic guidance to aviation weather**
- (3) Very low computing resource demand (just post processing)**
- (4) Provide a baseline to future NARRE/HRRRE development/evaluation**

■ Configuration

10 weighted time-lagged members collected:

6 NCEP's parallel RR members

(9 months parallel RR: March ~ Nov 2011)

4 operational NAM members

Output grids:

Grid#130 over CONUS (same as RUC/VSREF)

Grid#242 over Alaska

Forecast hours:

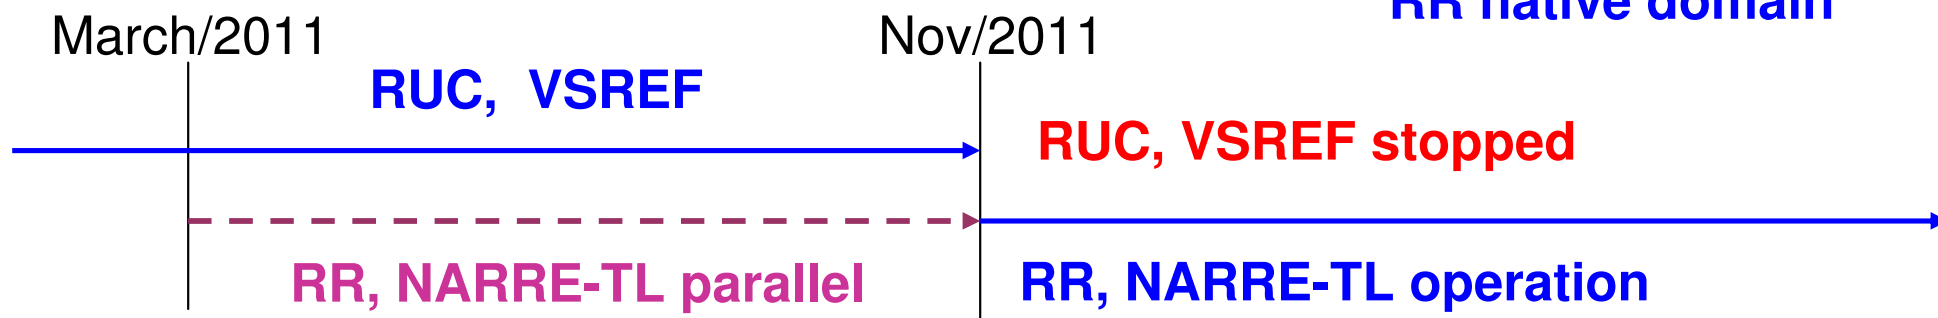

12 hours (same as VSREF)

**NARRE-TL Alaska,
(grid#242)**

NARRE-TL (grid#130)

RR native domain

Member Weighting = $1 - \text{forecast age (hr)}/30$:

1 for current fcst and 0 for 30hr-old fcst

(NAM always older than RR \rightarrow gives more weight to RR members)

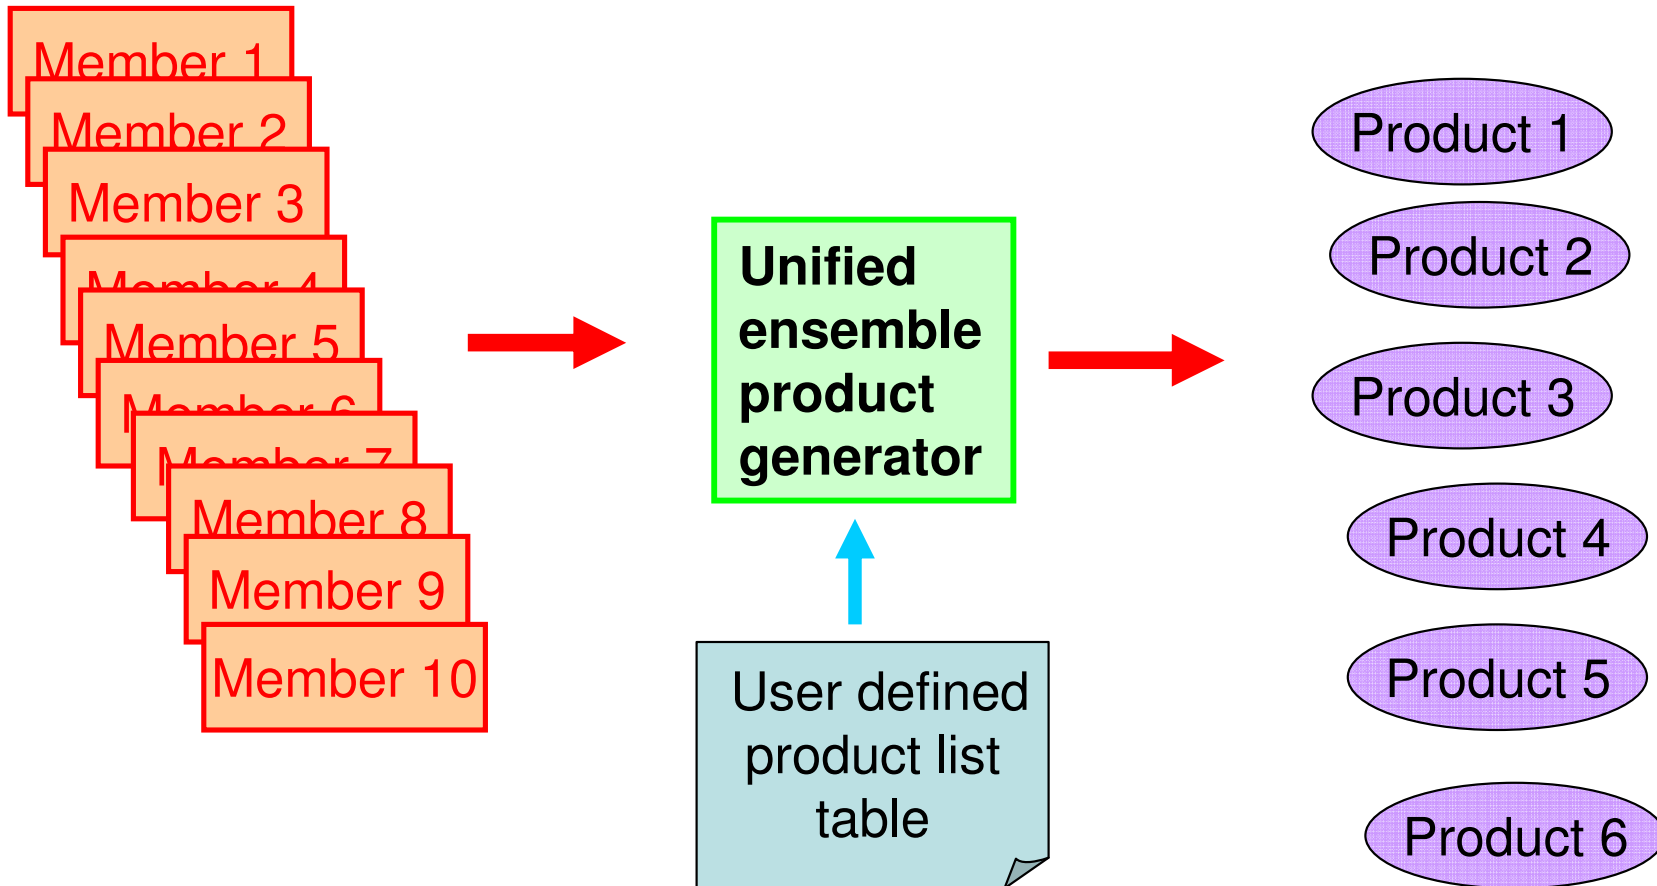

RR's first 6 hr forecasts are used up for time-lag

Example for 06Z cycle's NARRE-TL:

Ensemble product generation (post processing)

Product	Ensemble	VSREF	NARRE-TL
Icing	Occurrence prob on 8 FL	Y	Y
Turbulence (CAT)	3 severity occurrence Prob on 9 FL	Y	Y
Ceiling (cloud base)	Mean/spread/prob of 4 ranges	Y	Y
Visibility	Mean/spread/prob of 4 ranges	Y	Y
Low level Wind shear	Mean/spread/occurrence prob	Y	Y
Jet stream	Prob on 3 levels	Y	Y
Fog (light/dense)	Mean/spread/prob (Zhou & Ferrier)	Y	Y
Convection	Prob of occurrence (Steve W.)	Y	Y
Reflectivity	Prob of 4 thresholds (Ferrier)	Y	Y
Freezing height	Mean/spread	Y	Y
Precipitation type	Prob of rain and snow types	Y	Y
Accumulate Precip	Prob of 3 and 6hr acc. precip	Y	Y
Lightning	Prob of occurrence (D. Bright)	N	Y
Severe thunderstorm	Prob of occurrence (D. Bright)	N	Y

WEATHER

NARRE—Alaska: Probability of Icing at FL180 01H FCST from 14z Jun 20 2011. Verified Time: 15z 06/20/2011

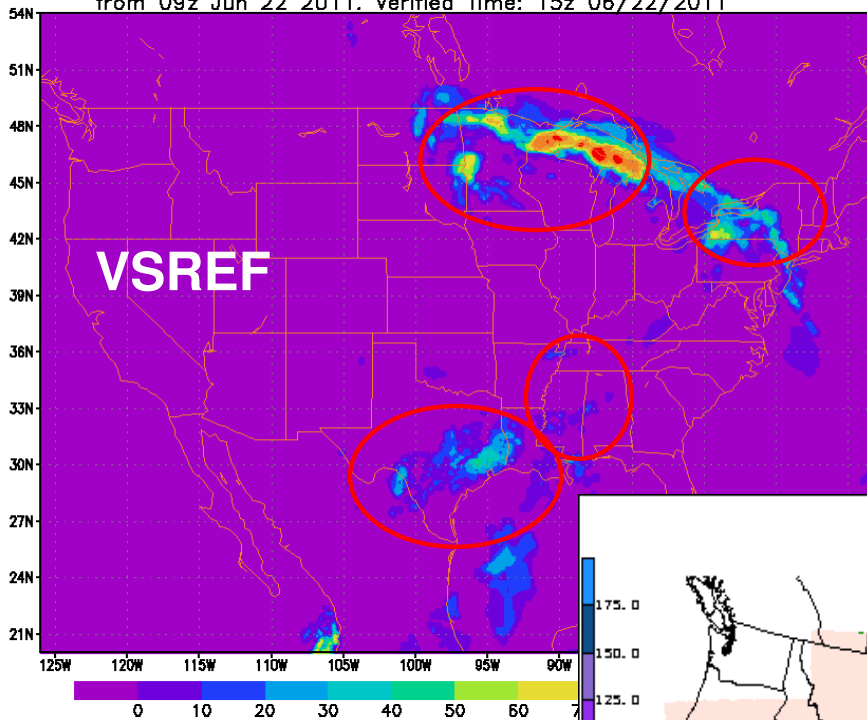

3hr. Accu. Prcp > 0.25 inch (6.35 mm) probability

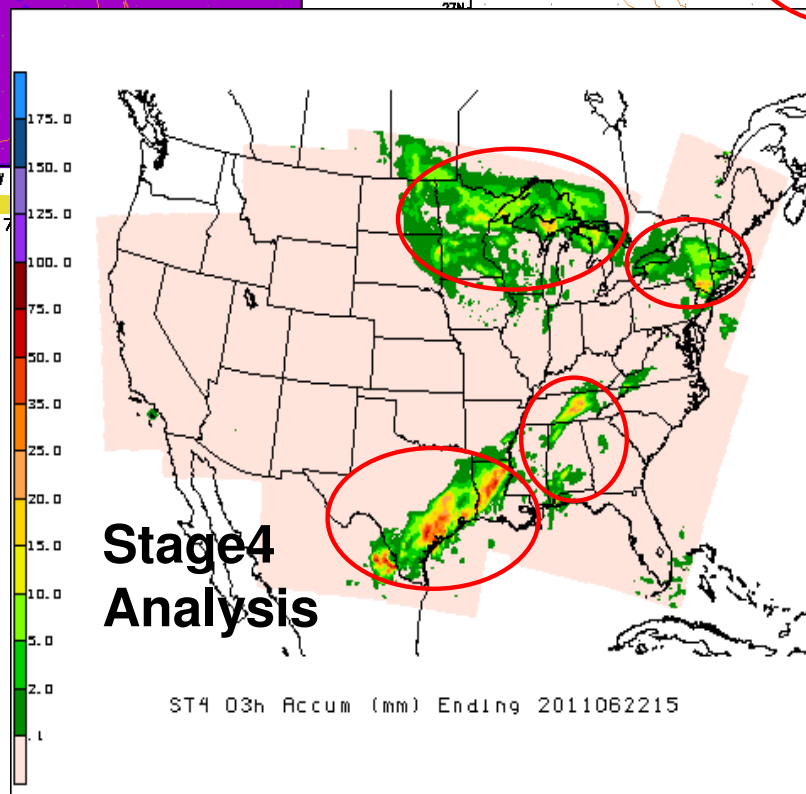

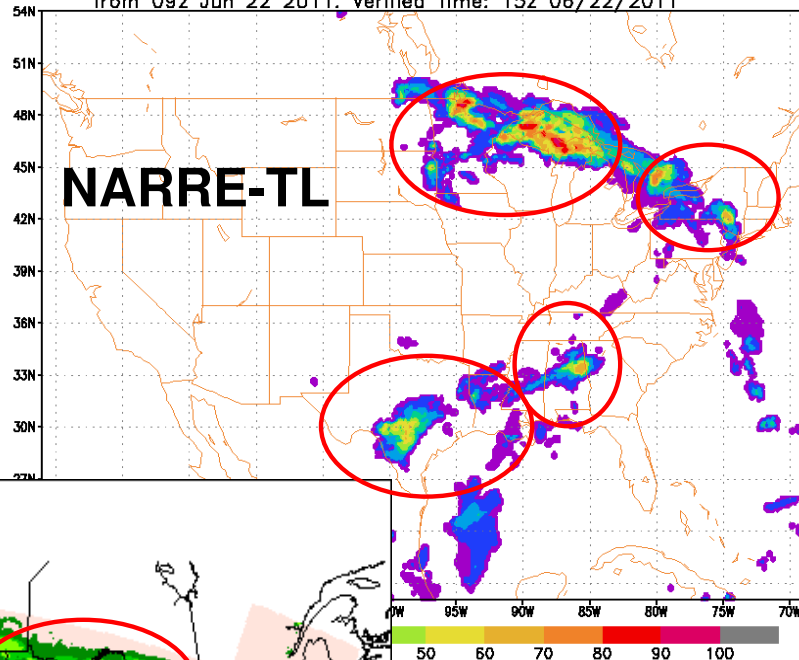

6hr forecast, validated 15Z, Jun 22, 2011

VSREF: 3hr APCP Prob > 0.25 Inch 06H FCST
from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

NARRE: 3hr APCP Prob > 0.25 Inch 06H FCST
from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

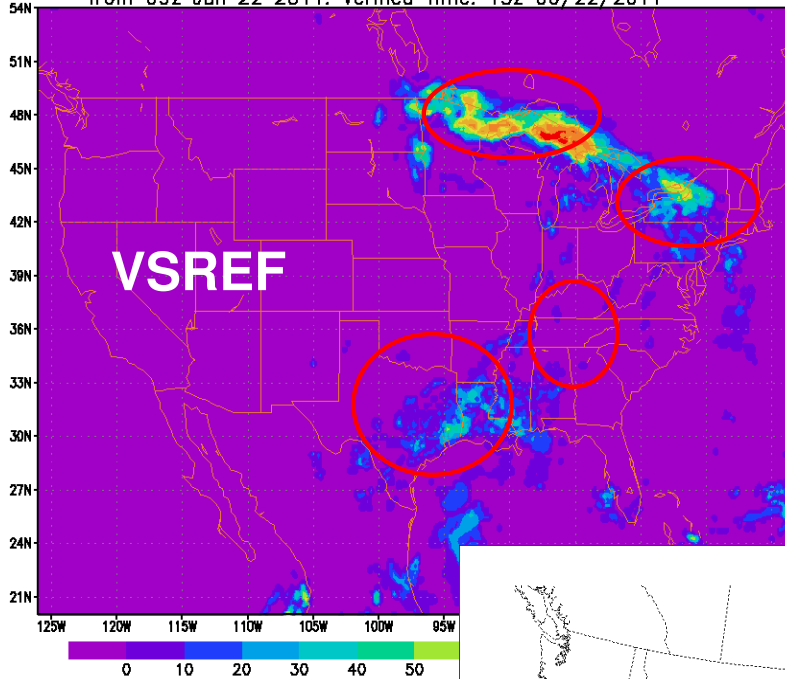

Reflectivity >30 dBZ Probability

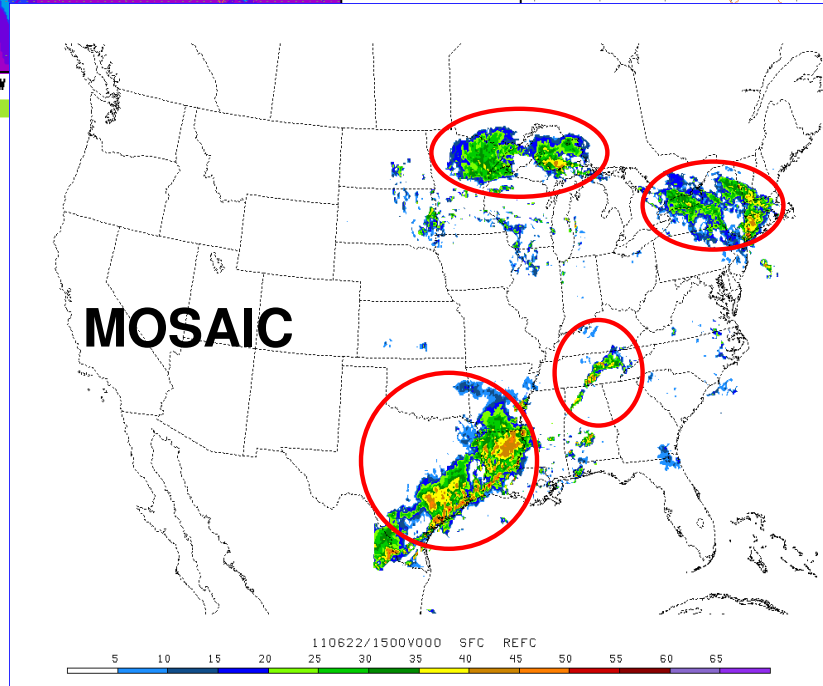

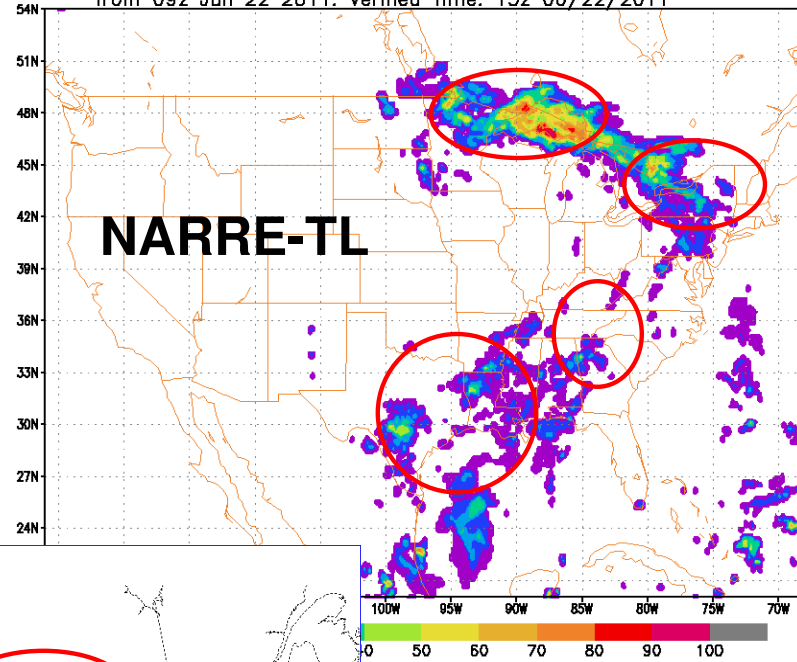

6hr forecast, Jun 22, 2011

VSREF: Probability of reflectivity > 30 dBZ 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

NARRE-TL: Probability of reflectivity > 30 dBZ 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

Icing probability 6hr forecast at FL240, Jun 22, 2011

VSREF

VSREF: Probability of Icing at FL240 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

NARRE

NARRE: Probability of Icing at FL240 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

Severe CAT probability 6hr forecast at FL300, Jun 22, 2011

VSREF

VSREF: Probability of Severe CAT at FL300 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

NARRE

NARRE: Probability of Severe CAT at FL300 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

Ceiling < 1000 feet probability 6hr forecast, Jun 22, 2011

VSREF

VSREF: Probability of Cloud Base < 1000 feet 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

NARRE

NARRE: Probability of Cloud Base < 1000 feet 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

Vis < 1 mile probability 6hr forecast, Jun 22, 2011

VSREF

VSREF: Probability of visibility < 1 mile 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

NARRE

NARRE: Probability of visibility < 1 mile 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

Low level wind shear occurrence prob 6hr forecast, Jun 22, 2011

VSREF

VSREF: Prob of Low Level Wind Shear > 20knots/2000ft 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

NARRE

NARRE: Prob of Low Level Wind Shear > 20knots/2000ft 06H FCST from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

Convection occurrence probability 6hr forecast, Jun 22, 2011

(both use Steve W. method)

VSREF

NARRE

VSREF: Prob of Convection 06H FCST
from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

NARRE: Prob of Convection 06H FCST
from 09z Jun 22 2011. Verified Time: 15z 06/22/2011

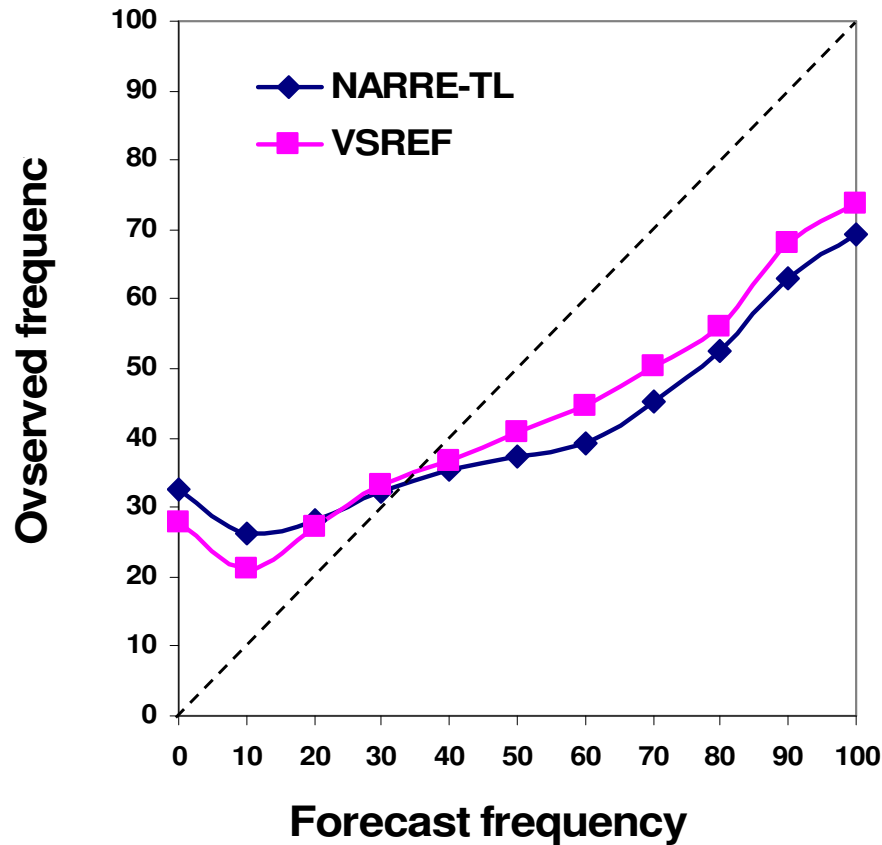

Probabilistic verification example (accumulated Apr 28 ~ Jun 29, 2011)

Icing probability forecasts of NARRE-TL and VSREF against ADDS-CIP

Icing Reliability at FL090 (725mb)
Against ADDS-CIP

Icing Reliability at FL180 (500mb)
Against ADDS-CIP

Next Steps

- **Keep NARRE-TL running and data flow after RR operational**
- **More verifications**
- **HRRRE-TL over CONUS (Geoff D. Suggested)**

4km NAM-nest, 4km HRW-ARW, 4km HRW-NMM, 4km Pyle (for SPC runs), 3km HRRR (GSD runs)

Summary

- **Based on NAM and NCEP's parallel RR runs, a 10-member time-lagged ensemble system NARRE-TL was first experimentally developed**
- **NARRE-TL has similar configuration in file structure and timing as VSREF, similar aviation products, but added 2 more products (lightning and severe thunderstorm probabilities)**
- **After parallel RR transits to operational RR in Nov 2011, NARRE-TL will continue run but VSREF will be stopped.**
- **Primary evaluations show a little bit stronger fields, better POD for NARRE-TL than VSREF. More evaluations will be focused.**

THANKS!
