

# Contradictions to IPCC's Climate Change Theory

Edwin X Berry, Ph.D., Physics

## The Problem

### The Problem Defined

### Physics Model versus UN IPCC Model

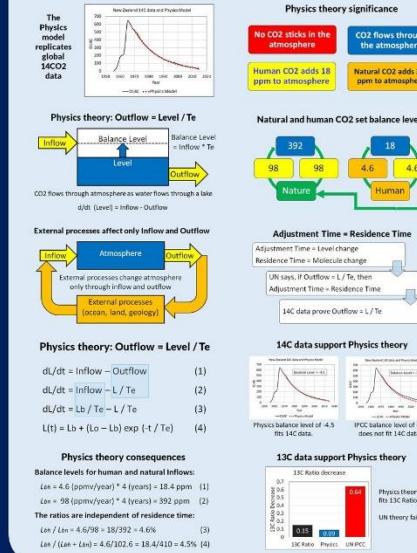

### Multiple lines of evidence support Physics Model

Item	Physics Model	UN IPCC Model
Replicates 14C data	Yes	No
Proves 14C outflow = Level / Residence time	Yes	No
Proves Adjustment time = Residence time	Yes	No
Shows human effect on 14C level	Yes	No
Shows human effect on 13C level	Yes	No
Proves no CO2 "sticks" in atmosphere	Yes	No
Treats human and natural CO2 the same	Yes	No
Simple theory applies to all CO2 definitions	Yes	No
Can restart calculation and continue simulation	Yes	No
UN core argument fails	NA	Yes
UN net importer argument fails	NA	Yes
UN theory fails correlation	NA	Yes
UN buffer capacity argument fails	NA	Yes

### CONTRADICTIONS TO IPCC'S CLIMATE CHANGE THEORY

Edwin X Berry

Climate Physics LLC, Bigfork, Montana, USA

For science details, please see my [preprint](#)

To be presented at the American Meteorological Society Annual Meeting

in Phoenix, Arizona

on January 8, 2019,

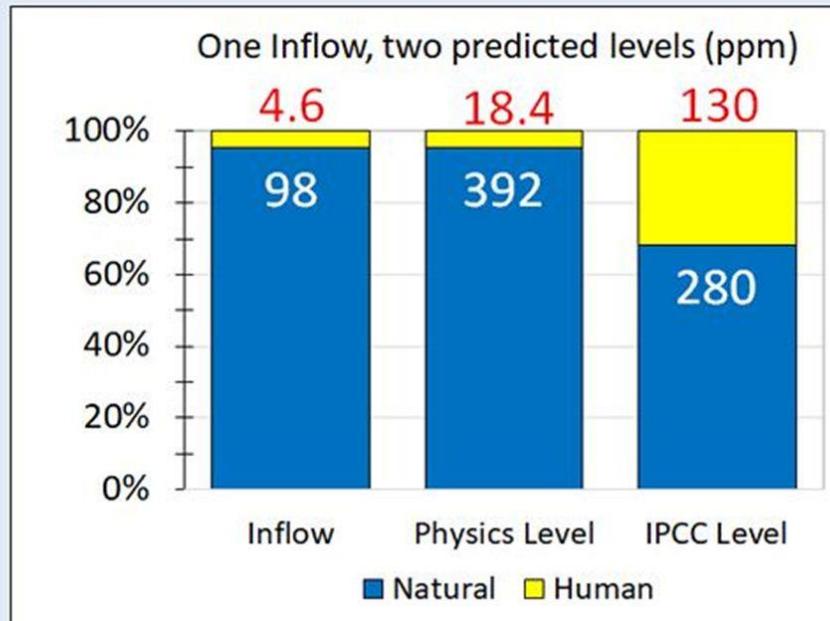

from 4 to 6 pm,

Hall 4.

See below for each panel

# Physics Model

The Physics model replicates global 14CO2 data

## Physics theory significance

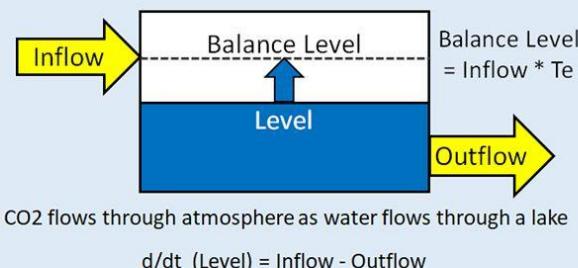

No CO2 sticks in the atmosphere

CO2 flows through the atmosphere

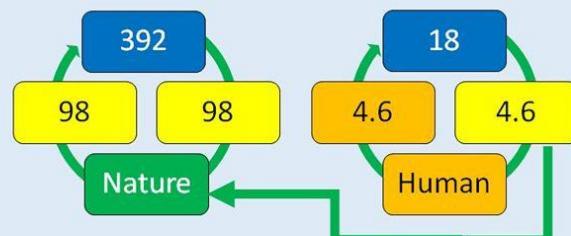

Human CO2 adds 18 ppm to atmosphere

Natural CO2 adds 392 ppm to atmosphere

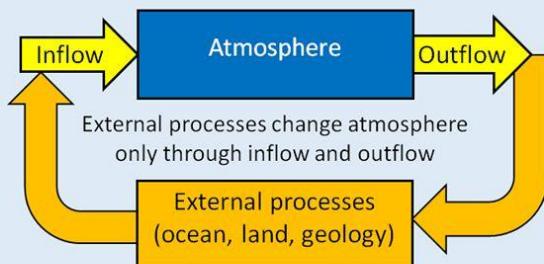

## Physics theory: Outflow = Level / Te

## Natural and human CO2 set balance levels

## External processes affect only Inflow and Outflow

## Adjustment Time = Residence Time

Adjustment Time = Level change

Residence Time = Molecule change

UN says, if Outflow = L / Te, then  
Adjustment Time = Residence Time

14C data prove Outflow = L / Te

## Physics theory: Outflow = Level / Te

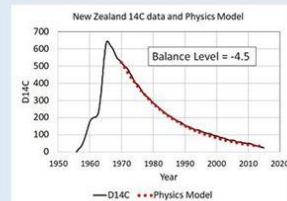

$$dL/dt = \text{Inflow} - \text{Outflow} \quad (1)$$

$$dL/dt = \text{Inflow} - L / Te \quad (2)$$

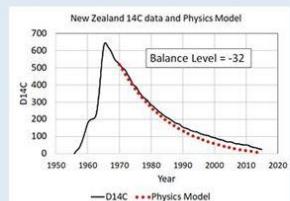

$$dL/dt = Lb / Te - L / Te \quad (3)$$

$$L(t) = Lb + (L0 - Lb) \exp(-t / Te) \quad (4)$$

## 14C data support Physics theory

Physics balance level of -4.5 fits 14C data.

IPCC balance level of -32 does not fit 14C data.

## Physics theory consequences

### Balance levels for human and natural Inflows:

$$Lbh = 4.6 \text{ (ppmv/year)} * 4 \text{ (years)} = 18.4 \text{ ppm} \quad (1)$$

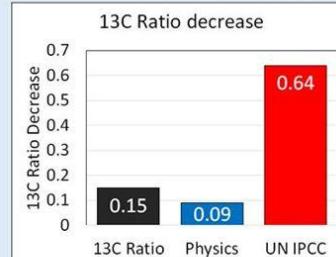

$$Lbn = 98 \text{ (ppmv/year)} * 4 \text{ (years)} = 392 \text{ ppm} \quad (2)$$

### The ratios are independent of residence time:

$$Lbh / Lbn = 4.6/98 = 18/392 = 4.6\% \quad (3)$$

$$Lbh / (Lbh + Lbn) = 4.6/102.6 = 18.4/410 = 4.5\% \quad (4)$$

## 13C data support Physics theory

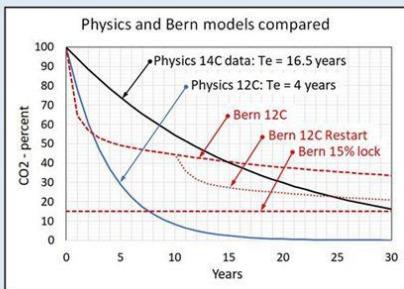

Physics theory fits 13C Ratio.

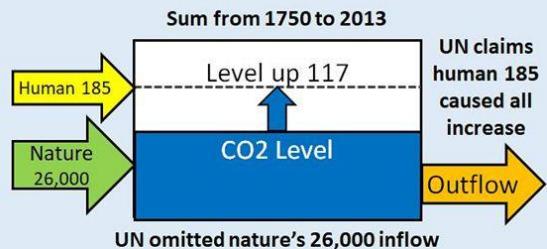

UN theory fails.

# UN IPCC Model

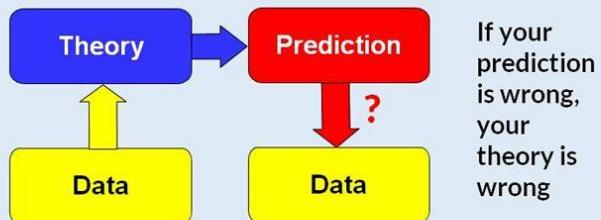

UN Bern model can't simulate 14C data and can't replicate itself on restart

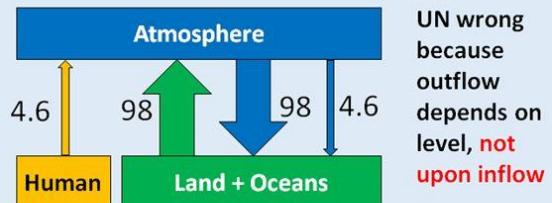

## UN core argument fails

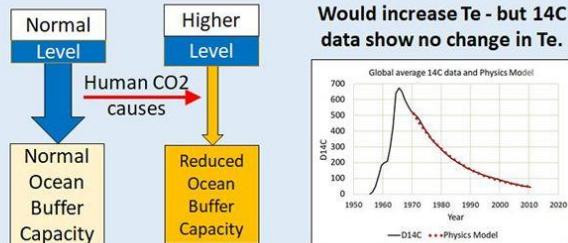

## UN theory fails the Scientific Method

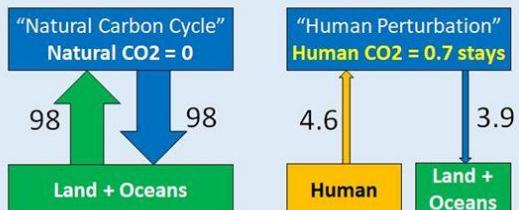

## UN says nature can't increase Atmos CO2 because nature absorbs Human CO2

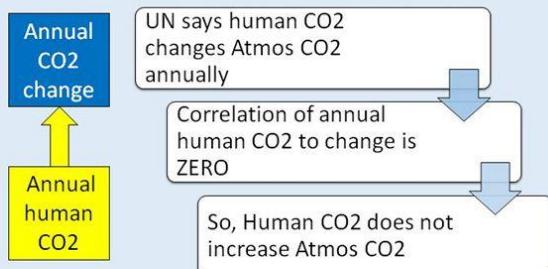

## UN says Human CO2 reduces "buffer capacity"

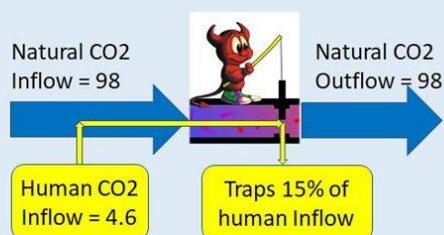

## UN says 15% of human CO2 stays in atmosphere

## Human CO2 does not correlate with Atmos CO2

## The UN demon traps human CO2

## Bern model traps 15% of HUMAN CO2

$$L(t) = L_0 [ 1 + 0.150 \\ + 0.252 \exp(-t/173) \\ + 0.279 \exp(-t/18.5) \\ + 0.319 \exp(-t/1.19) ]$$

## UN theory must apply to natural CO2
