

Development of NCEPLIBS umbrella to service the operational modeling and community research

Hang Lei (1), George Vandenberghe(1), Mark Potts(1),
Mark Iredell (2), Arun Chawla (2)

NOAA NCEP EMC

Outline

- Introduction to build scripts of NCEPLIBS
- What is the umbrella build ?
- Available umbrella build tools for public use
- How to use different Umbrella build based on resources on your machine
- Operation and support
- Summary

Building Scripts for NCEPLIBS

Original Build Script

- It is provided by the initial developer. It has been used for years without problems.
- The script varies among different libraries.
- Relatively, it is difficult to manage and modify.

NCO EE2 Unified Script

- Clean universal makefile.
- Build script define specific setting.
- Configure set up the env and compiler options.
- Strong portability

Cmake Build Script

- Based on cmake v3.6 and up.
- User sonly need to specify the required ENV variables.
- Strong portability.
- For public release.

Problems we have

- Hard to compile
- Set up ENV
- Unknown dependency
- Compiler change
- Multiple tags
- No project specific
- Third party libs

A simple operation solution to address all issues that users may meet with strong portability on various machine environment.

What is the umbrella build ?

Library code storage
(VLAB/Github)

Automatically adapt
to changes/different
type of users

Various NCEP librares

Multiple versions

Necessary External Libs

Multiple compilers

Multiple platform

Changeable compiler
Options

Table setup
and selection;
Automatically
compile; install;
including Unix
module setup.

NCEPLIBS-umbrella:
Simple setting can solve
trivial problems

Produce release
branch for
specific task

User friendly

Umbrella build systems

1 NCEPLIBS-umbrella

- Two versions based on VLAB and github repos.
- Install new and historical versions.
- Include external library for FV3GFS.

<https://github.com/NOAA-EMC/NCEPLIBS-umbrella.git>

2 unified-umbrella

- One short script.
- Only take care of nceplibs versions with unified scripts.
- Intel and GNU compilers.

<https://github.com/NOAA-EMC/NCEPLIBS-umbrella.git>

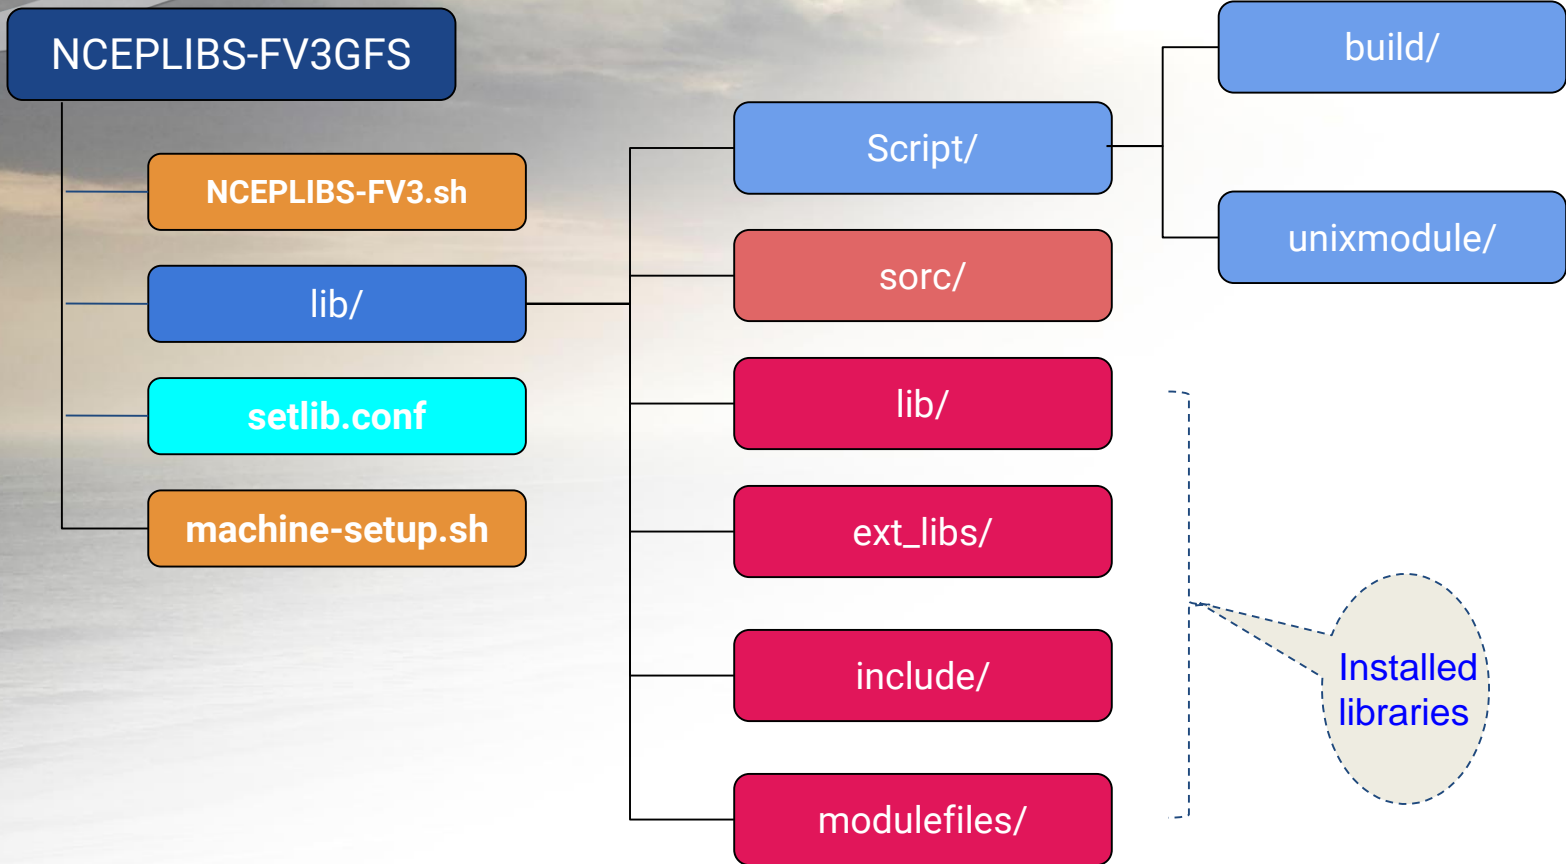

3 NCEPLIBS

- Cmake based.
- Under UFS release project.
- Specific version bounded.
- Strong portability.

<https://github.com/NOAA-EMC/NCEPLIBS.git>

7

Software and installation structure

2 unified umbrella

- Set up compiler.
- Set up environment variables and installation path.
- Set up version number.
- Specific the machine or use general configure.

How to run:

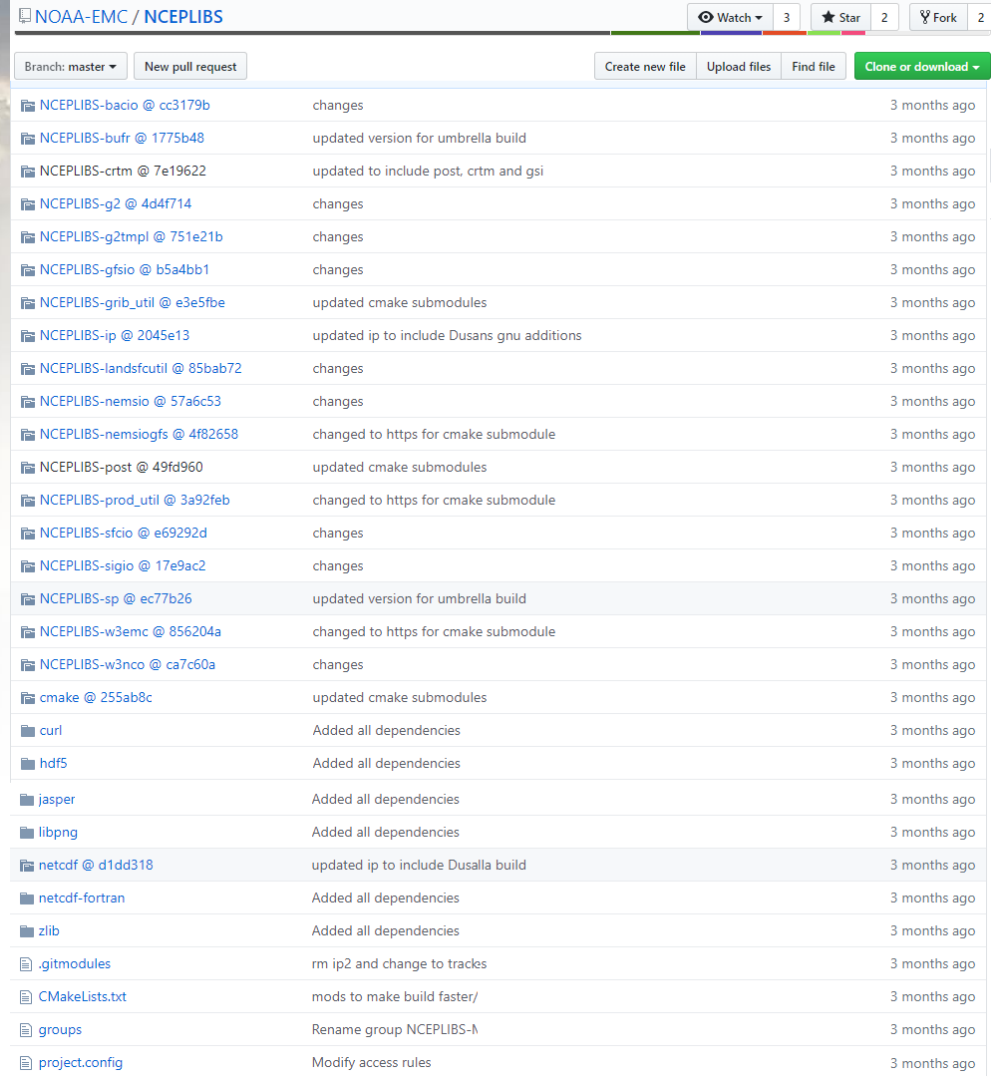

Step 1: git clone all NCEPLIBS libraries and checkout the versions.

Step2 : After set up above variables,

```
% sh unified_umbrella.sh
```

3 NCEPLIBS

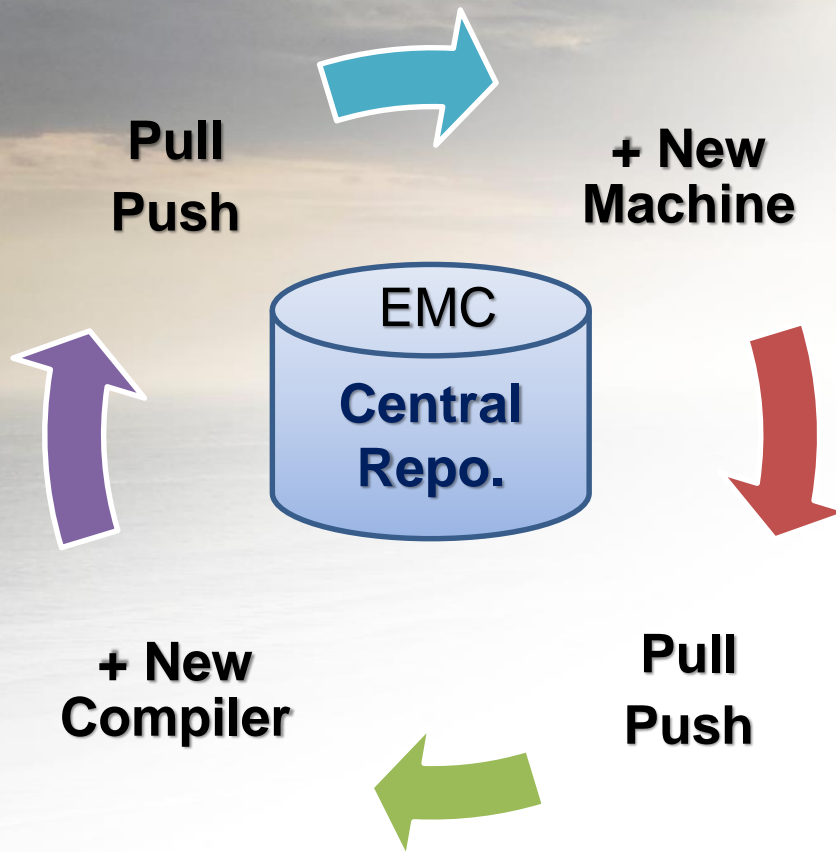

- Step 1. configure:
cmake
-DCMAKE_C_COMPILER=
-DCMAKE_CXX_COMPILER=
-DCMAKE_Fortran_COMPILER=
-DMPI_LIBRARIES=
-DMPI_INCLUDES=
-DNETCDF_LIBRARY=
-DNETCDF_INCLUDE= .
- Step 2. Build:
cmake --build .

The screenshot shows the GitHub repository page for NOAA-EMC / NCEPLIBS. The repository is on the master branch. The page displays a list of recent commits, each with a commit hash, a description of the changes, and the time since the commit was made (all 3 months ago).

Commit Hash	Description	Time Ago
NCEPLIBS-bacio @ cc3179b	changes	3 months ago
NCEPLIBS-bufr @ 1775b48	updated version for umbrella build	3 months ago
NCEPLIBS-crtm @ 7e19622	updated to include post. crtms and gsi	3 months ago
NCEPLIBS-g2 @ 4d4f714	changes	3 months ago
NCEPLIBS-g2tmpl @ 751e21b	changes	3 months ago
NCEPLIBS-gfsio @ b5a4bb1	changes	3 months ago
NCEPLIBS-grib_util @ e3e5fbc	updated cmake submodules	3 months ago
NCEPLIBS-ip @ 2045e13	updated ip to include Dusans gnu additions	3 months ago
NCEPLIBS-landscutil @ 85bab72	changes	3 months ago
NCEPLIBS-nemsio @ 57a6c53	changes	3 months ago
NCEPLIBS-nemsiogfs @ 4f82658	changed to https for cmake submodule	3 months ago
NCEPLIBS-post @ 49fd960	updated cmake submodules	3 months ago
NCEPLIBS-prod_util @ 3a92feb	changed to https for cmake submodule	3 months ago
NCEPLIBS-sfcio @ e69292d	changes	3 months ago
NCEPLIBS-sigio @ 17e9ac2	changes	3 months ago
NCEPLIBS-sp @ ec77b26	updated version for umbrella build	3 months ago
NCEPLIBS-w3emc @ 856204a	changed to https for cmake submodule	3 months ago
NCEPLIBS-w3nco @ ca7c60a	changes	3 months ago
cmake @ 255ab8c	updated cmake submodules	3 months ago
curl	Added all dependencies	3 months ago
hdf5	Added all dependencies	3 months ago
jasper	Added all dependencies	3 months ago
libpng	Added all dependencies	3 months ago
netcdf @ d1dd318	updated ip to include Dusalla build	3 months ago
netcdf-fortran	Added all dependencies	3 months ago
zlib	Added all dependencies	3 months ago
.gitmodules	rm ip2 and change to tracks	3 months ago
CMakeLists.txt	mods to make build faster/	3 months ago
groups	Rename group NCEPLIBS-N	3 months ago
project.config	Modify access rules	3 months ago

Operations and Support

- ❑ Manage at NOAA EMC
- ❑ Community application and development involved
- ❑ Rolling development
- ❑ Fast-paced code-review & release on github NOAA_EMCC domain

Summary

1. Three umbrella build tools has been developed for users to install NCEPLIBS libraries.
2. All umbrella build tools need to be adjusted, when repository or machine changes.
3. It is a open platform in github to continue this development and pull more contributions from the community research.

Thanks!
