

Takeharu Kouketsu\*, Hiroshi Uyeda and Tadayasu Ohigashi (Hydrospheric Atmospheric Research Center, Nagoya University, Nagoya, Japan)

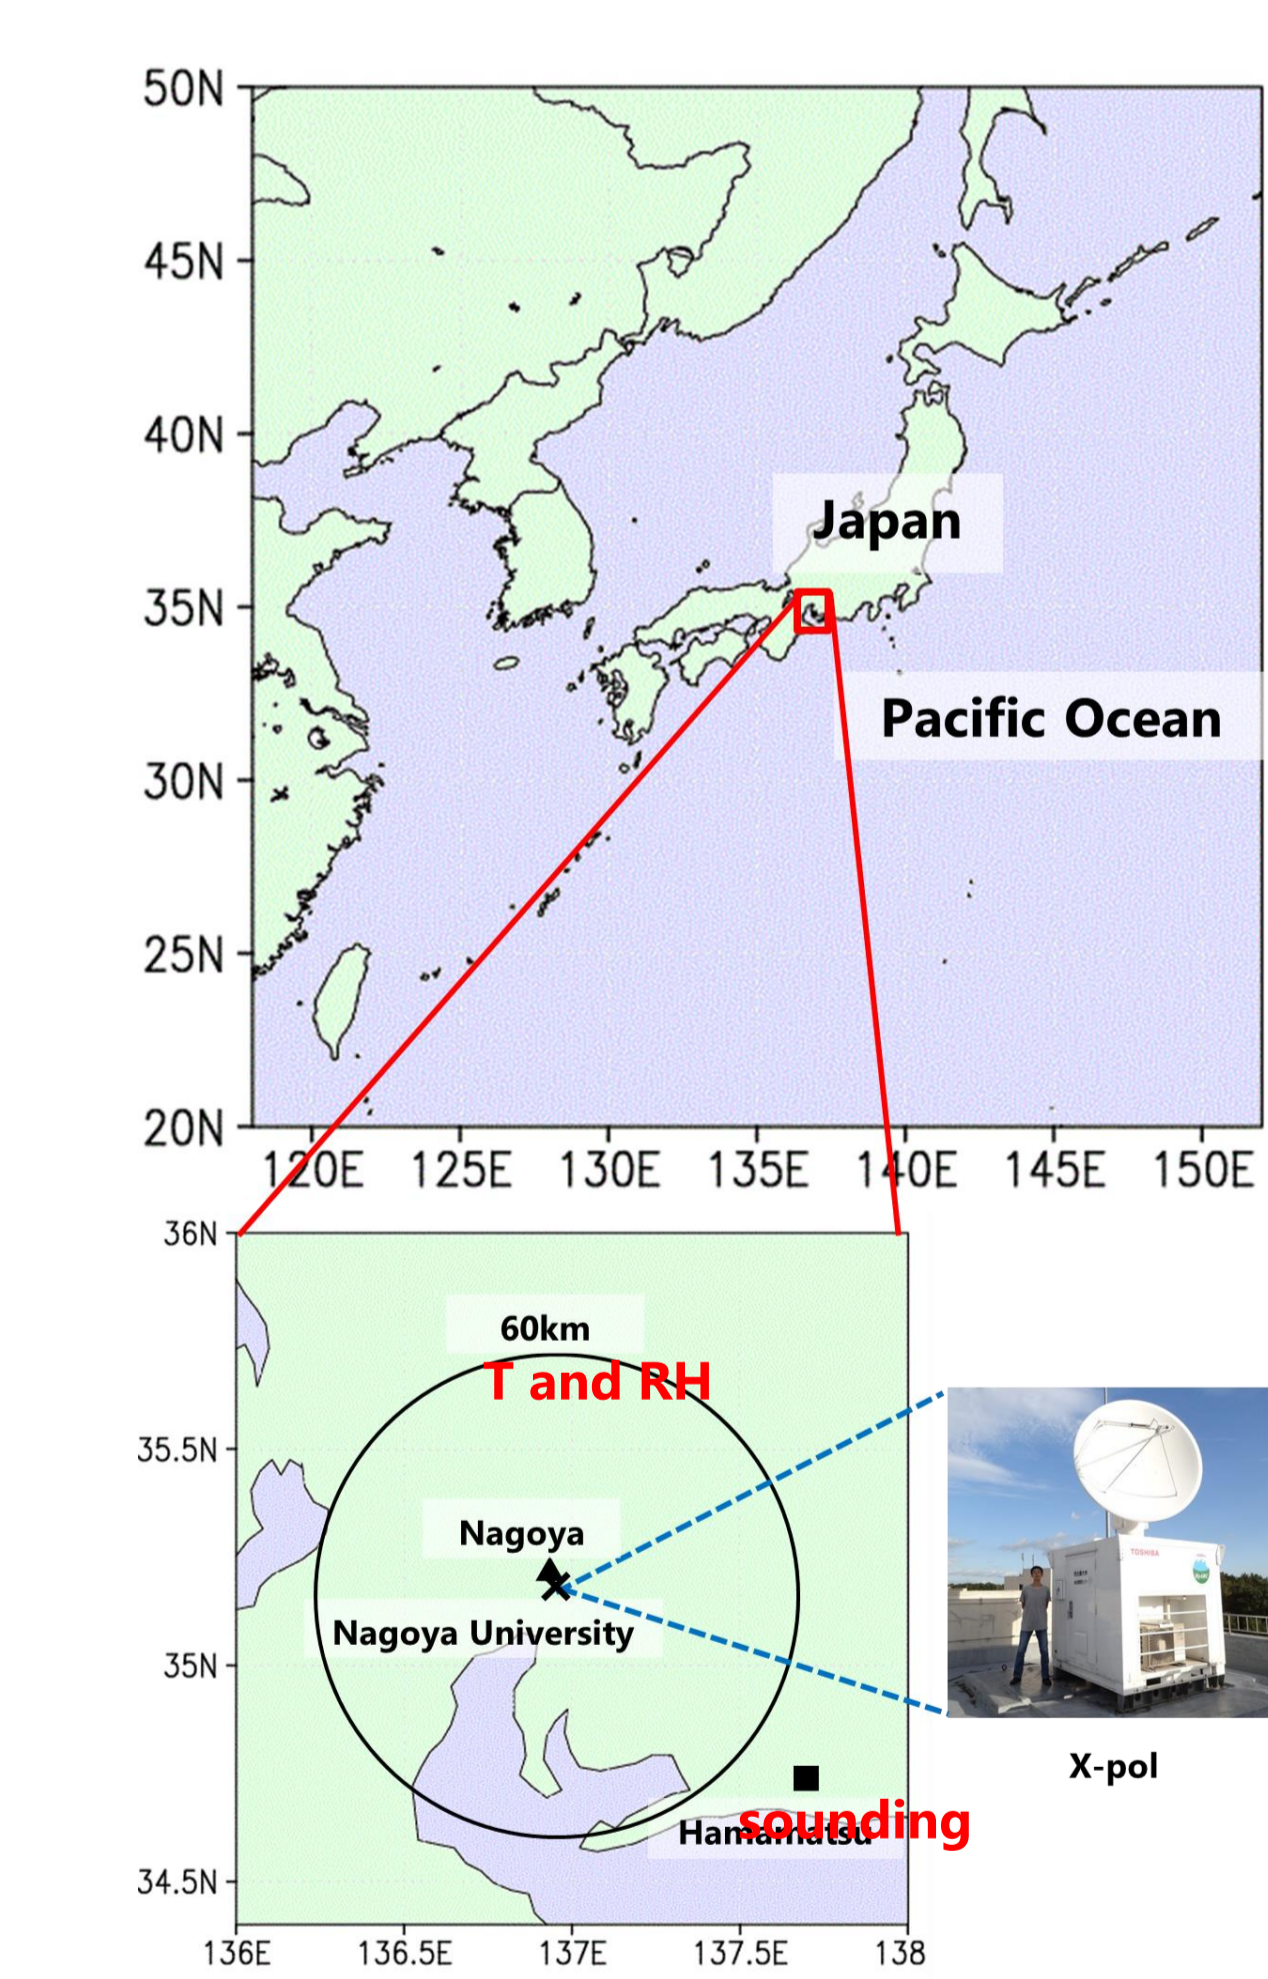

Introduction

We have constructed a **hydrometeor classification** (hereafter, HC) method for X-band **polarimetric radars** (X-pols) and examined **microphysical structure** of a **simple** thundercloud in Kouketsu et al. (2011).

In this study, we examine relationship between polarity of cloud-to-ground (CG) lightning and microphysical structure of more **complicated** system, a **group** of thunderclouds generated on August 25, 2010 about 40 km north of Nagoya, central area of Japan.

Conclusions

- We examined **microphysical structure** of a **group of thunderclouds** using HC method for X-pol.
- Following results were obtained not only for **whole** of the group of thunderclouds but for **individual thunderclouds** A, B, C and D;
  - **Negative CGs** were observed when the volume of **dry graupel** region was **large** (more than 50 km<sup>3</sup>) and **increasing rapidly**.
  - **Positive CGs** were observed when **large volume** of **dry snow** and **ice crystal** regions were identified by HC.
- The **peaks of negative CG** of the **whole** of the group of thunderclouds **correspond** to the **peaks of negative CG** of individual thunderclouds.

▼Characteristics of the X-pol

Frequency	9375 MHz
Antenna size	2.0 m
Beam width	1.2°
Transmitter Type	Solid state component
Peak Power	200 W
Max range	61.8 km
Pulse width	1 μs (within 5 km) 32 μs (beyond 5 km, pulse compression)
PRF	2000 Hz / 1600 Hz (dual PRF)
Transmission	45° or H only or V only
Rotation rate	3.0 rpm (PPI) , 1.2 rpm (RHI)
Resolution	150 m
Nyquist velocity	16.0 ms <sup>-1</sup> / 12.8 ms <sup>-1</sup>

●Hydrometeor Classification

Polarimetric Parameters

- $Z_h$  (Reflectivity)
- $Z_{dr}$  (Differential Reflectivity)
- $K_{dp}$  (Specific Differential Phase)
- $\rho_{hv}$  (Correlation Coefficient)

Meteorological Parameters

- T (Temperature: Sounding)
- RH (Relative Humidity: surface)

0.5 km × 0.5km × 0.5km  
grid spacing

HC method  
(Kouketsu and Uyeda, 2010)

Hydrometeor

- Drizzle
- Rain
- Wet Snow
- Dry Snow
- Ice Crystal
- Dry Graupel
- Wet Graupel
- Small Hail
- Large Hail
- Rain and Hail

Volume of each Hydrometeor Type

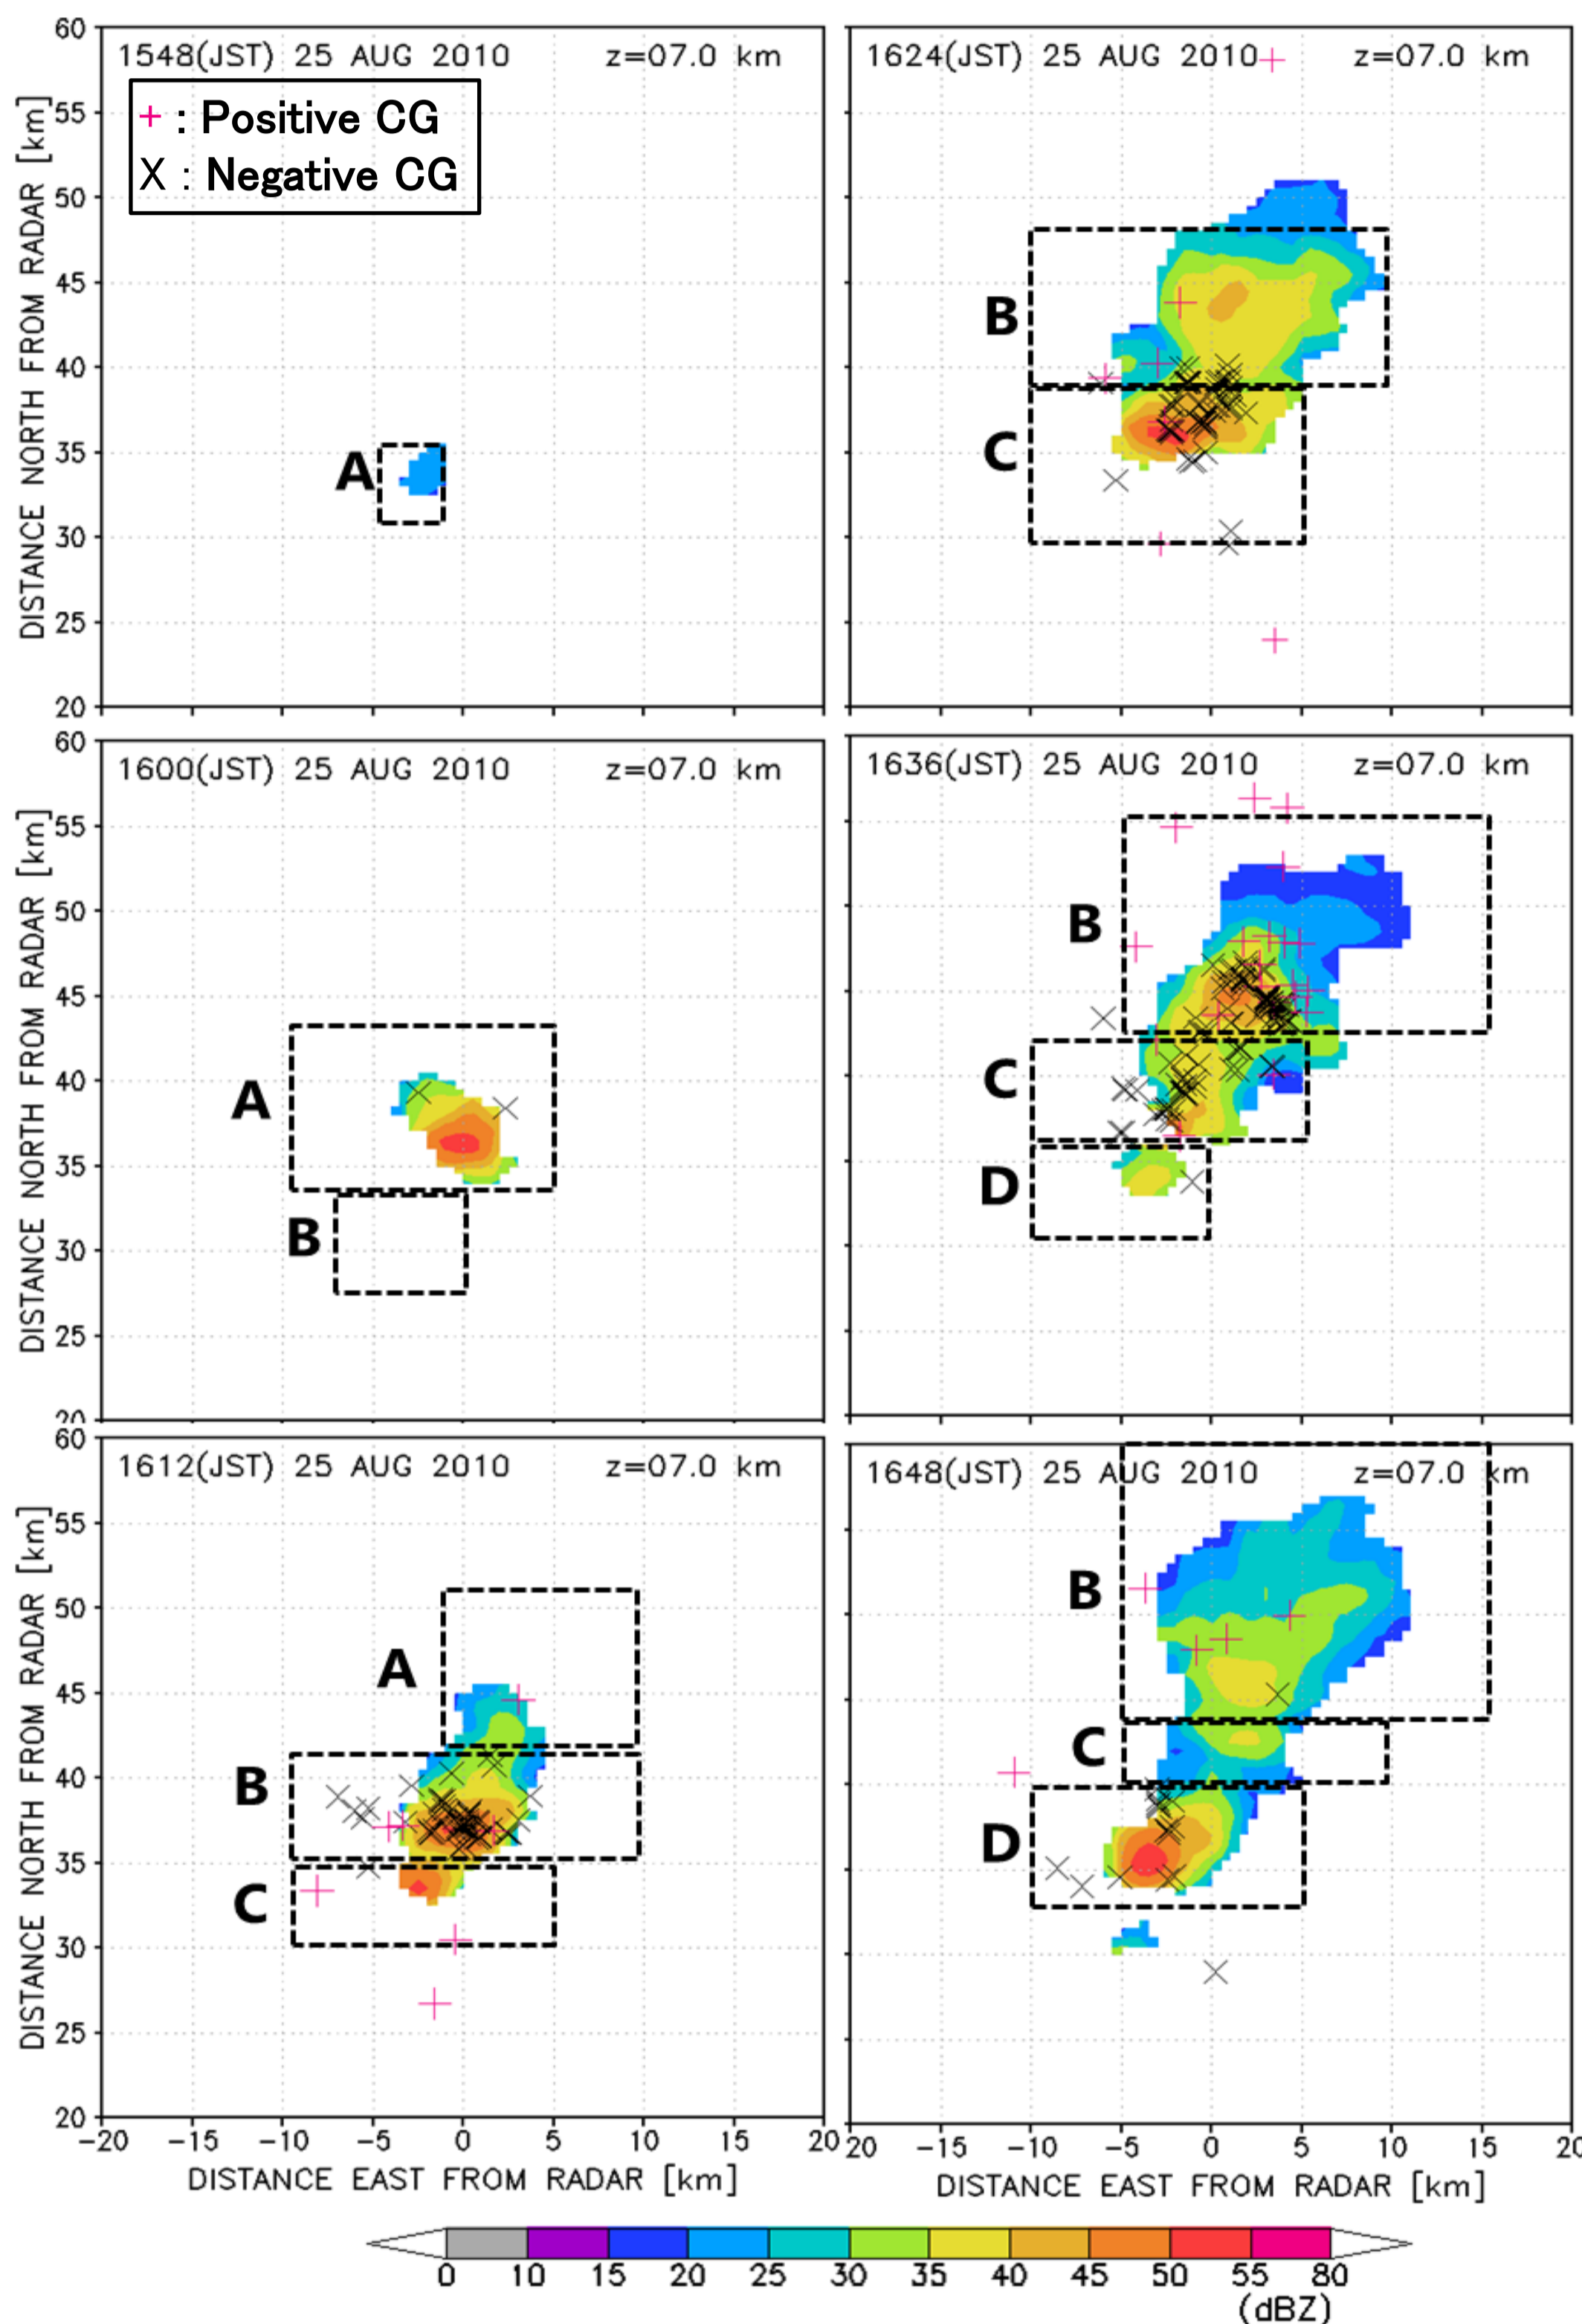

- Ice Crystal
- Dry Graupel
- Dry Snow
- Wet Graupel
