CFLOS “Problem”

The Problem: CFLOS, beneath an opaque cloud layer, has been impossible to determine, directly, from passive space sensors

Corollary: Passive satellites measure cloud tops well ... and surface observers the bases ... but neither do an adequate job of characterizing the intervening layers ...

Addressing the Problem – Cloud Profiling Radar

TOA

Sfc

Here an opaque cloud at “B” hides the fact that there is a poor CFLOS at levels below the cloud top, while at “A” it hides a significantly better CFLOS just below the upper cloud layer.

CloudSat: 94 GHz Cloud-Profiling Radar

Near circular, sun-synchronous orbit ... ~705km altitude, 14.5 orbits/day, 16-day revisit cycle

CloudSat: 94 GHz Cloud-Profiling Radar

Wavelength ~ 3 mm

Near-nadir Pointing (0.16° forward)

Pulse Repetition Freq. ~ 4000

- **Return signal processed every 160 milliseconds (~ 6 times/sec)**
- **at 4000 PRF ... ~ 630 pulses are averaged to produce a vertical cloud image (“profile”)**

160 msec = 1.07 km along ground track

Granules, Profiles and Bins : CPR footprint & granule size

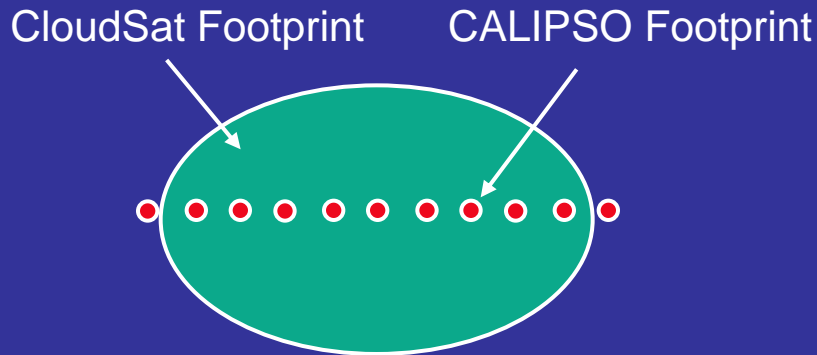

1 GRANULE = 1 orbit of data (~ 40,786 km / ~ 37,082 profiles)

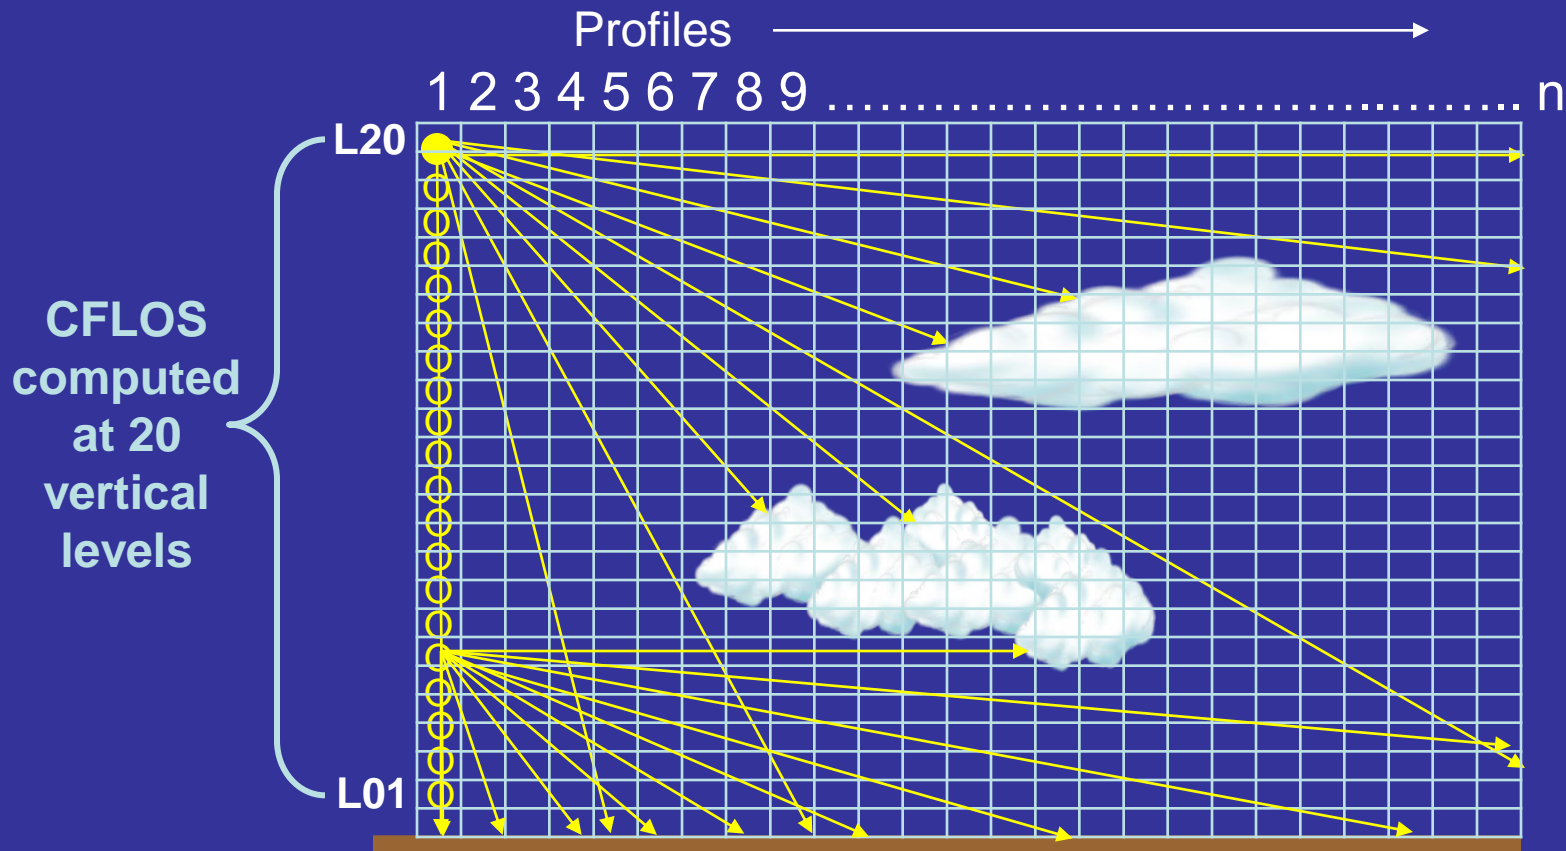

98.9 minutes per orbit 14.56 orbits/day

CALIPSO: Dual-Channel Lidar

- (CALIOP) “Cloud-Aerosol Lidar with Orthogonal Polarization”
 - 532 and 1062 nm wavelengths
 - Nadir Pointing
 - Vertical resolution 30m, 60m (< 8km)
 - 80m instantaneous footprint
 - Products generated at a horizontal resolution of 333m, 1km, and 5km

CFLOS calculation

For each CloudSat profile, CFLOS is determined by looking at 10° intervals from nadir to 90° (horizontal) at each of 20 vertical levels. These levels extend from .96-km to 19.2-km altitude at ~1-km intervals. (every 4 bins in the vertical = 4X240m = .96km)

CFLOS Calculation

| 13 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| 12 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| 11 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 2 |
| 10 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 9 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 8 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 7 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 6 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 5 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 4 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 3 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 92 |
| 2 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 91 |
| 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 43 |

CFLOS is calculated by determining the distance (km) that we can see before encountering a cloud.

“0” indicates that we did not have a cloud in the line-of-sight.

PCFLOS – Observation Count & CFLOS Distance

The probability of **Cloud-Free-Line-of-Sight (PCFLOS)** was generated for each month from June 2006 – Aug 2010

January (2007-2010)

Observation Count →

CFLOS Distance: For all of the following examples, if the distance to the first cloud encountered was greater than **25km**, it was considered a Cloud-Free-Line-of-Sight. (or ... if there was a cloud-free view to the land/ocean surface)

Summary ...

- CloudSat CPR data provides an exciting new view of the vertical distribution of cloud

- This 3-D view can be used to calculate CFLOS at varying vertical levels and view angles

- CPR-derived CFLOS can be used to validate CFLOS derived by “a priori cloud thickness” methods ... or for model cloud fraction initialization

Welcome to the CloudSat Data Processing Center

CloudSat is a satellite mission designed to measure the vertical structure of clouds from space. The spacecraft will produce detailed images of cloud structures which will contribute to a better understanding of clouds and climate.

We encourage you to find out more about the CloudSat mission and the Data Processing Center by perusing this website. However, some of the data and features on this site are available only to CloudSat project team members.

Click here to visit the main web site for the CloudSat project at Colorado State University. (Note: You will be leaving this site for the main CloudSat website.)

DPC News

8/10 - 2D-CLOUDSAT-TRMM availability update

4/3 - 2D-CLOUDSAT-TRMM January 2009 data released

3/30 - 2B-CWC-RVOD and 2C-PRECIP-COLUMN released to the general science community
